NORTH MERRICK
SCHOOL DISTRICT

April 10, 2019

Inventive North Merrick Students!

How does microwaving impact seed germination?

Will heating or cooling magnets affect strength?

Which winter wardrobe is the warmest?

These are just a few of this year's amazing Science Fair projects. The winners from the three schools were invited to share their work in a museum walk at the April 9 Board of Education meeting where they enthusiastically discussed their findings with the board trustees, district administrators, and parents. The Science Fairs are an annual tradition here in North Merrick during February and March and include students from grades 3-6. The students do extensive research on subjects of their choice, and they compile their evidence and conclusions on creative trifold boards for presentation. I was so impressed with our elementary students! Our future is in such good hands!
